Prompt Optimization Pipeline

Powered by Gemini · Based on the 14-Technique Prompting Framework

YOUR INPUT

Searching the best web series on Amazon Prime for college group.

TASK ANALYSIS

This task is a recommendation request for web series, but it's nuanced by a specific target audience ("college group") and platform. While it's a straightforward query, the "best for college group" aspect benefits from techniques that help the model understand the audience's preferences and deliver highly relevant suggestions beyond generic popular titles.

TOP 3 RECOMMENDED PROMPT TYPES

Type 1 - Persona Prompting ✓ Best Choice

Why this technique: Assigning a persona (e.g., 'a college student') helps the model understand and align its recommendations with the specific tastes and preferences implied by 'college group'.

You are an expert streaming content curator and social event planner, specializing in identifying engaging and relevant entertainment for young adult demographics. Your task is to recommend the best web series available on Amazon Prime, specifically tailored for a college group to watch together.

Consider series that are highly engaging, popular, span diverse genres, and contain elements that resonate with college-aged viewers, such as humor, relatable situations, compelling plots, or themes that spark discussion. Avoid overly niche or complex series that might not suit group viewing.

Provide a list of 3-5 top recommendations. For each recommendation, include:
1. **Title**
2. **Genre(s)**
3. **Brief Synopsis**
4. **Specific reasons why it's a great fit for a college group** (e.g., humor, plot twists, relatable themes, potential for discussion, binge-worthiness).

Type 2 - AI Interview Technique

Why this technique: This technique allows the model to ask clarifying questions about the college group's preferences (e.g., genres, humor, themes) to gather crucial context before making highly tailored recommendations.

You are a streaming content expert and recommendation engine specializing in Amazon Prime Video content. My goal is to find the 'best' web series available on Amazon Prime, specifically tailored for a college group to watch together.

To ensure I provide you with the most relevant and excellent recommendations, I need to understand the college group's preferences and viewing context better. Before offering any suggestions, please ask me 3-5 specific, insightful questions that would help you perfectly narrow down the options. Focus on details that would significantly impact your recommendations.

Your output should consist *only* of these clarifying questions, numbered, without any preamble or concluding remarks.

Type 3 - Zero-Shot Prompting

Why this technique: At its core, this is a direct recommendation task, which is a primary use case for zero-shot prompting to get a clear and immediate list of suggestions.

Recommend the top 5 web series available on Amazon Prime Video that are ideal for a college group. Focus on series with engaging plots, broad appeal, and good potential for group viewing or discussion. For each recommendation, include the title, primary genre(s), and a brief explanation of why it would be a great choice for this demographic.
